

One Patient. One Care Team. One Secure System.

The Akario Secure Exchange SuiteSM for Clinical Communication and Collaboration

Secure Communication and Collaboration

The Akario Secure Exchange Suite from DrFirst can dramatically improve the productivity, efficiency and security of patient care communications in the hospital and among a patient's broader circle of caregivers.

Akario applications are built for healthcare, providing the security to enable HIPAA-compliant exchange of patient PHI with core features and functionality designed to help providers access and share clinical data, collaborate, and facilitate treatment.

Better communication drives better health outcomes. With Akario, you can add speed and effectiveness to care team collaboration, reduce potential for communication errors resulting in adverse events, and extend communication outside the hospital to reduce the likelihood of patient readmission.

AkarioMail

Secure email supporting HIPAA and DIRECT protocols and enabling clinical information sharing among hospital staff and providers across the healthcare community

AkarioBackline

Feature-rich secure texting (iOS, Android and desktop) for rapid contact and collaboration on patient care in progress, as well as content attachment to the EMR/EHR/HIS patient record

AkarioEnterprise

Web-based, robust, user-friendly administrator console facilitating enterprise-level oversight, administration, reporting and audit support for Akario Backline secure texting

AkarioConnect

Integrated transitions of care communication to facilitate event notifications within the hospital and between the hospital and follow-on care providers to reduce hospital readmissions
